

Environmental Performance Index 2020 and ranking of states of India.

Indrani Chandrasekharan*, Bhagyam Chandrasekharan@ and Shweta Srinivasan#

Effective and balanced utilization of the country's resources is at the Core of India's development strategy which also includes enhancing efforts towards compliance of national legislations and international commitments. Considering the influence of natural resources depletion and unabated pollution on health and many sectors of the economy an Environmental Performance Index (EPI) was constructed in 2013 to recognize the efforts made by the states to arrest degradation of the environment and rank them. An attempt has now been made to include four new criteria; Biodiversity, Agriculture, fisheries and Disaster management with 16 indicators and further refine the existing five criteria by adding seven more indicators taking the total of criteria to 9 ,indicators to 37 and evolve EPI 2020.

This article, in addition to detailing the methodology for constructing EPI 2020, which could serve as a monitoring tool to gauge the performance of states and central government yearly will also enable monitoring progress in achieving related SDG and Sendai targets and goals.

An attempt has also been made to compare the scores and ranking of EPI-2020 with Yale EPI 2018.

Keywords: Air and water quality, environment, GSDP, performance index, scores and ranks, EPI 2013, Yale EPI 2018, SDG, Sendai, Biodiversity, Disaster Management.

The Planning Commission Environmental Performance index PC-EPI¹ 2013 was evolved after careful perusal of all variables and categories considered under various studies in 2013. To begin with 5 criteria (Air pollution, Forests, water quality, waste management and climate change) comprising 16 indicators were chosen. and these integrated to arrive at a composite index. To make EPI-2013 comprehensive, Biodiversity, Agriculture, Fisheries and Disaster Management as criteria with 4 indicators each have now been added. In the existing criteria, Air Pollution, SPM has been split into PM 2.5 and PM10 as indicators, in water quality and waste management criteria one indicator each and two indicators in Climate Change have been added and **EPI, 2020** evolved. EPI 2020 now comprises, 9 criteria and 37 indicators.

To recognize the efforts made by the states to arrest degradation of the environment including Climate change effect ,while pursuing efforts to increase per capita GSDP a methodology to construct EPI 2020 +GDP index has now been evolved and based on scores states ranked.

The EPI 2020 {{and EPI 2020+GDP}} index now evolved will not only enable better understanding and efforts made by the states in Environmental health and Ecosystem Vitality(2018 EPI framework)² but also gauge the relationship between GSDP and sustainable development.

*Dr Indrani Chandrasekharan is Former Adviser, Planning Commission, New Delhi 110 070, India

** Dr Bhagyam Chandrasekharan, IFC , Knowledge Management Analyst, World Bank Group, Chennai, India
and # Dr Shweta Srinivasan, Asst Prof of Finance , Rutgers University, Princeton, NY

As EPI, 2020 is based on indicators for which yearly data is mandated by law to be collected and published by the GOI, it could also serve as a tool for monitoring the SDG and Sendai Goals and targets set out to start with.

The relationship between economic growth and environmental sustainability of a country is complicated considering that large sections of the country's population depend on natural resources for their livelihood. Industrialization/urbanization if not associated with the requisite level of governance can influence the environmental health and sustainability of a state and the nation. It is well recognized that environmental degradation leads to additional economic hardships to the vulnerable sections of the population.

Environmental problems therefore should no longer be viewed by the states as a consequence of development alone, but there should be continued focus on pollution abatement, promotion of adherence to environmental standards, natural resources conservation and adopting the 5Rs (Reduce ,Reuse, Recycle, Recover, and Remanufacture).

Environmental indicators, Methodology and weightage

Selection of the appropriate indicators, methodology and assigning scores for arriving at acceptable indicators under various criteria has been a subject of much debate and research. Many believe that environmental degradation due to pollution be measured by actual emission data and efforts made to meet the standards of hazardous substances, but others feel that it should include factors which influence its spread and intensity. Regional disparity and natural endowment of the state are also considered important when ranking the states.

Many recent publications ^{3,4,5}, and the three methodologies: (a) environmental quality index (EQI)⁶, (b) environmental indicators – Organization for Economic Co-operation and Development (OECD)⁷ are mentioned and (c) 2018 environmental performance index (EPI) of Yale University² which has been evolved every two years and is discussed briefly in this article.

After a careful study of the above, to make EPI-2013 comprehensive, Biodiversity, Agriculture, Fisheries and Disaster Management as criteria with 4 indicators each have now been added. In the existing criteria, Air Pollution, SPM has been split into PM 2.5 and PM10 as indicators, in water quality and waste management criteria one indicator each and two indicators in Climate Change have been added and **EPI, 2020** evolved. EPI 2020 now comprises, 9 criteria and 37 indicators (Table-3) which calculates EPI scores for the selected criteria and indicators for all the states and Union Territories (UTs).

(a) Environmental quality index

Mukherjee and Chakraborty⁶ suggest that the EQI for the states is linearly dependent on a set of observable indicators and can be determined by adopting the Human Development Index (HDI) method, by putting the selected variable to start with under eight broad categories. The idea is that the 63 environmental variables under the 8 categories when combined would give a composite EQI ranking which is a measure of the environmental well-being of the states, i.e. those with higher scores are characterized by cleaner environment.

(b) Environment at a Glance Report

The Environment at a Glance report presents a digest of major environmental trends in OECD countries in areas such as climate change, air quality, biodiversity, water resources and circular economy. The analysis and key messages are based on indicators from the OECD Core Set of Environmental Indicators – a tool to monitor environmental progress and performance and to track the course towards sustainable development. It builds on the interactive Environment at a Glance web-based platform launched on 18 November 2019.

The OECD's core set of indicators on the environment comprises climate change, ozone layer depletion, eutrophication, acidification, toxic contamination, urban environmental quality, biodiversity, cultural landscapes, waste, water resources, forest resources, fish resources, soil degradation (desertification, erosion), material resources and socio-economic, sectoral and general indicators.

(c) 2018 environmental performance index

The 2018 Environmental Performance Index (EPI) ranks 180 countries on **24 performance indicators across ten issue categories** covering environmental health and ecosystem vitality. The 2020 EPI is expected sometime in June 2020. The EPI- offers a scorecard that highlights Scorers and strugglers in environmental performance, best practices, and provides guidance for countries that aspire to develop sustainably and achieve the SD Goals. The 2018 EPI data and methodology has generated new rankings founded on the advances in environmental science and analysis. The EPI builds on measures relevant to two core objectives – (i) reducing environmental stress to human health (the environmental health objective) and (ii) protecting ecosystems and natural resources (the ecosystem vitality objective).

Results of first ten countries are shown in **Table -1**. Switzerland leads the world based on strong performance across most issues, especially air quality and climate protection. In general, high scorers exhibit longstanding commitments to protecting public health, preserving natural resources, and decoupling greenhouse gas (GHG) emissions from economic activity.

As per the scores aggregated for the 24 indicators chosen under 10 **criteria Table-2**, India and Bangladesh are ranked at 177 and 199 respectively near the bottom of the rankings. Low scores on the EPI suggest the need for national sustainability efforts on a number of fronts, especially cleaning up air quality, protecting biodiversity, and reducing GHG emissions. As the EPI project has highlighted for two decades, better data collection, reporting, and verification across a range of environmental issues are urgently needed. The existing gaps are especially pronounced in the areas of sustainable agriculture, water resources, waste management, and threats to biodiversity. Supporting stronger global data systems thus emerges as essential to better management of sustainable development challenges.

The overall EPI rankings indicate which countries are doing best against the array of environmental pressure that every nation faces. From a policy perspective, greater value derives from drilling down into the data to analyze performance by specific issue, policy category, peer group, and country. Such an analysis can assist in refining policy choices, understanding the determinants of environmental progress, and maximizing the return on governmental investments.

Table-2: -India and Bangladesh Rank.

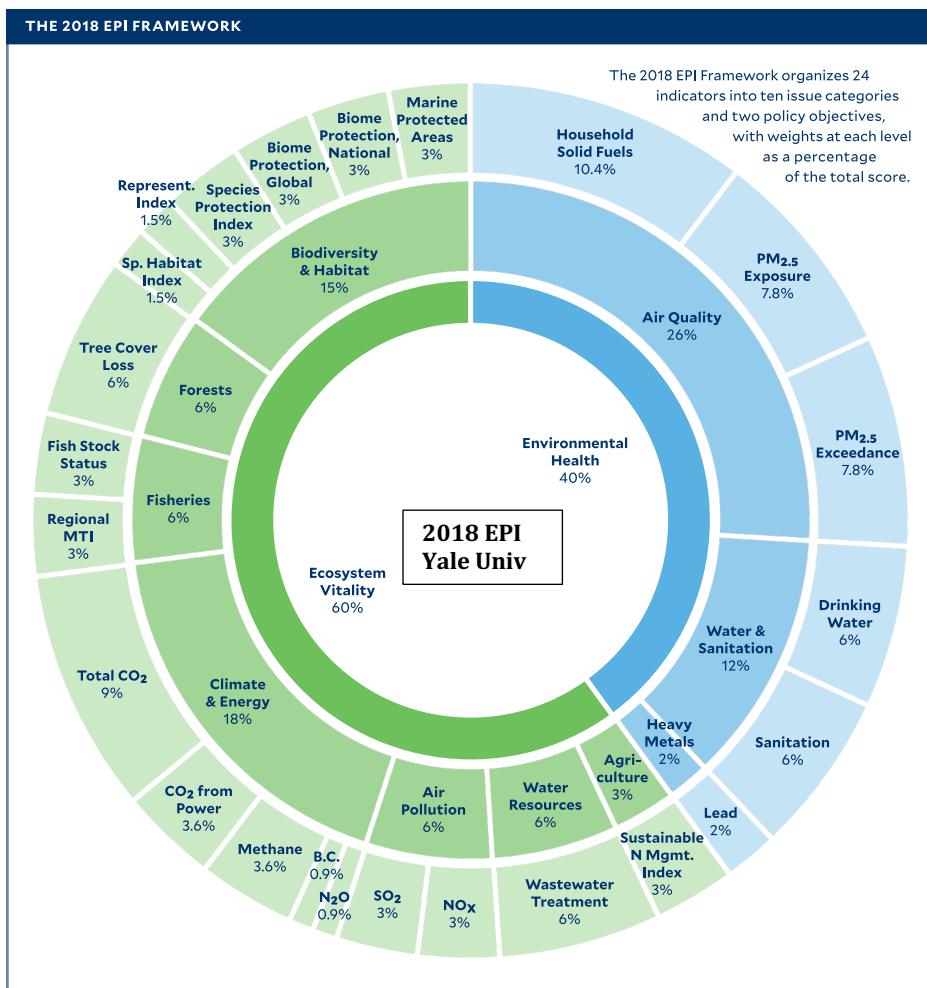

EPI RK	Country	Score	Reg.Std
170	Angola	37.44	40
171	Central African Republic	36.42	41
172	Niger	35.74	42
173	Lesotho	33.78	43
174	Haiti	33.74	12
175	Madagascar	33.73	44
176	Nepal	31.44	24
177	India	30.57	25
178	Dem. Rep. Congo	30.41	45
179	Bangladesh	29.56	26
180	Burundi	27.43	46

Table-1. EPI 2018 Yale top ten Countries and India

Country	epi rank	EPI score	Env. health	Eco System Vitality
India	177	30.57	9.32	44.74
Switzerland	1	87.42	93.57	83.32
France	2	83.95	95.71	76.11
Denmark	3	81.6	98.2	70.53
Malta	4	80.9	93.8	72.3
Sweden	5	80.51	94.41	71.24
UK	6	79.89	96.03	69.13
Luxembourg	7	79.12	95.07	68.48
Austria	8	78.97	86.38	74.03
Ireland	9	78.77	95.92	67.34
Finland	10	78.64	99.35	64.83

The 2018 EPI represents a composite index. After collection of data on 24 individual metrics of environmental performance, as shown in Figure-1, these metrics were aggregated into a hierarchy beginning with ten issue categories: Air Quality, Water & Sanitation, Heavy Metals, Biodiversity & Habitat, Forests, Fisheries, Climate & Energy, Air Pollution, Water Resources and Agriculture. These issue categories are then combined into two policy objectives—Environmental Health and Ecosystem Vitality—and then finally consolidated into the overall EPI. To allow for meaningful comparisons, scores were constructed for each of the 24 indicators, placing them onto a common scale where 0 indicates worst performance and 100 indicates best performance. How far a country is from achieving international targets of sustainability determines its placement on this scale. The indicator scores are then multiplied by weights, shown in fig -1, and added together to produce scores at the levels of the issue categories, policy objectives, and the final EPI. These scores serve as the basis for country ranks. Indicators are constructed from the most recently available data for each of the 24 metrics of environmental performance. To track changes over time, the same methods to historic data in order to show what the EPI score for each country would be in a baseline year, generally ten years prior to the current report. To evolve performance of every country and aggregating those data into measurements of global performance and score these global aggregations the same 0–100 scale as individual countries, showing the state of the world on each indicator has been carried out. The results of the 2018 EPI—the scores, rankings, trends, and global aggregates—translate environmental data into terms that are comprehensive and comprehensible.

A comparison of the EPI 2020 (9 Category and 37 Indicators) now constructed with 2018 EPI Yale University (10 Category and 24 Indicators) clearly indicates that the Avg national Score of India is 0.3818 , the highest being 0.4967 (1st ranked state) and lowest as 0.3172 (Haryana state) compared to yale study score which is 0.3057. India has been ranked 177 as per Yale report. Inclusion of Disaster Management as a Category and a relook at indicators and weightage could be considered in Yale EPI 2020.

The Environmental Performance Index-2020

The PC-EPI 2013

The PC EPI was evolved in 2013⁸ after careful perusal of all variables and categories considered under various studies. To begin with 5 categories comprising 16 indicators were chosen and the normal deviation and distance travelled method was used for indicators for which standards have been notified and in respect of indicators with no standards, i.e. forests, etc. a method was evolved and these integrated to arrive at a composite index. The idea was that the 16 indicators selected, when combined could give a composite EPI ranking of the states. The criteria were air pollution, water quality, forests, waste management and climate change. Indicators were sought to cover the full spectrum of issues underlying each of the major components of the environment, i.e. criteria identified. To ensure the use of the best-suited metrics, the indicator selection criteria applied were relevance (the indicator clearly tracks the environmental issue of concern), performance orientation (the indicator tracks ambient conditions or on-the-ground results to national standards and requirements) and data quality (the data used represent the measures taken by the states).

The Environmental Performance Index-2020

After a careful study of all the referred publications sited, to make PC-EPI-2013 comprehensive, Biodiversity, Agriculture, Fisheries and Disaster Management as criteria with 4 indicators each have now been added. In the existing criteria, Air Pollution, SPM has been split into PM 2.5 and PM10 as indicators, in water quality and waste management criteria one indicator each and two indicators in Climate Change have been added and **EPI, 2020** evolved. EPI 2020 now comprises **9 criteria and 37 indicators (Table-3)** which calculates EPI scores for the selected criteria and indicators for all the states and Union Territories (UTs). **Table-4** details the Datasets used for construction of Indicators. (appendix)

Table-3: - EPI 2020 Criteria and indicators

S. No	Criteria	Indicators	No. of variables
1	Air Pollution	1. NOx, 2. SOx, 3. PM2.5, PM10	4
2	Forests	1. TFC as % of state GA and Contribution to national FC, 2. Change in forest cover, 3. Growing Stock and 4. Afforestation efforts.	4
3	Water quality	1. % Dom. Waste water treated, and 2. Surface water quality (.DO , BOD & TFC). 3. Ground water extraction % and 4. % of 17 Cat. Of Ind. complying with WWT Standards.	4
4	Waste Management	1. MSW, 2. Bio-med.,3. Hazardous Wastes and 4.E- waste.	4
5	Climate Change	1. Preparation of SAPCCs, 2. % RE Gen Capacity, 3.CO2 Saved from LED, 4. % Grid connected Solar Power,5. Lives lost per Crore population.	5
6	Biodiversity	1.Indigenous livestock population change, 2. change in wetland 3. change in Protected Area Network and 4. % desertification.	4
7	Agriculture	1.Change in land under Agriculture,2. Vuln. Agri.Dist., 3. %' shares in total GSVA 17-18, 4. Land under Micro irrigation.	4
8	Fisheries	1. Fish Stock change, 2. Marine and Biodiversity Protected Area, 3. Funds for dev. of fisheries and 4. Valuation (Cr) of marine fish landing. 2017 +2018 and Share % of landing.	4
9	Disaster Management	1. Status of State and District DM plan, 2. Inst.Setup 3. Budget and 4. Avg. Forest fire incidence ,2016+17.	4
TOTAL 9			37

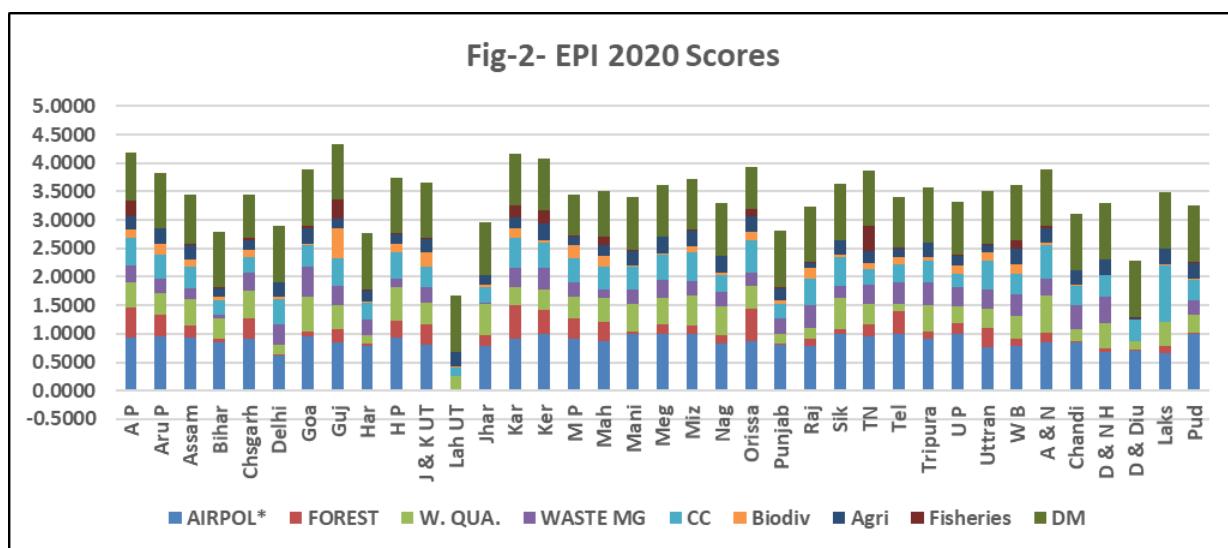

To allow for meaningful comparisons, scores were constructed (Table-4) for each of the 37 indicators, placing them onto a common scale where 0 indicates worst performance and 100 indicates best performance.

Table 5 presents EPI-2020 scores and ranking of the states and UTs as of Jan 2020 for the nine categories separately, based on arithmetic mean of scores of all the indicators covered under each category and ranking of the states, based on mean cumulative scores (Figure2).

With an EPI score of 0.4967, 0.4821, 0.4805, 0.4686 and 0.4555, Gujarat, Andhra Pradesh, Karnataka, Kerala and Orissa in that order have been ranked as the best-performing states respectively.

EPI 2020 with addition of **4 new Criteria and 16 new indicators** on analysis ranks Gujarat (0.4977), Tamil Nadu (0.4361), West Bengal (0.3902), Andhra Pradesh (0.3750), and Kerala (0.3719) as five top ranking states in that order.

Table 5.1-5.9 depicts the performance scores and ranking of the States and UTs of all the 37 indicators. The indicators considered for measuring the performance of AAQ are Sulphur dioxide (SO_x), nitrogen oxide (NO_x) PM2.5 and PM 10. The data in respect of all the four indicators is the annual average.

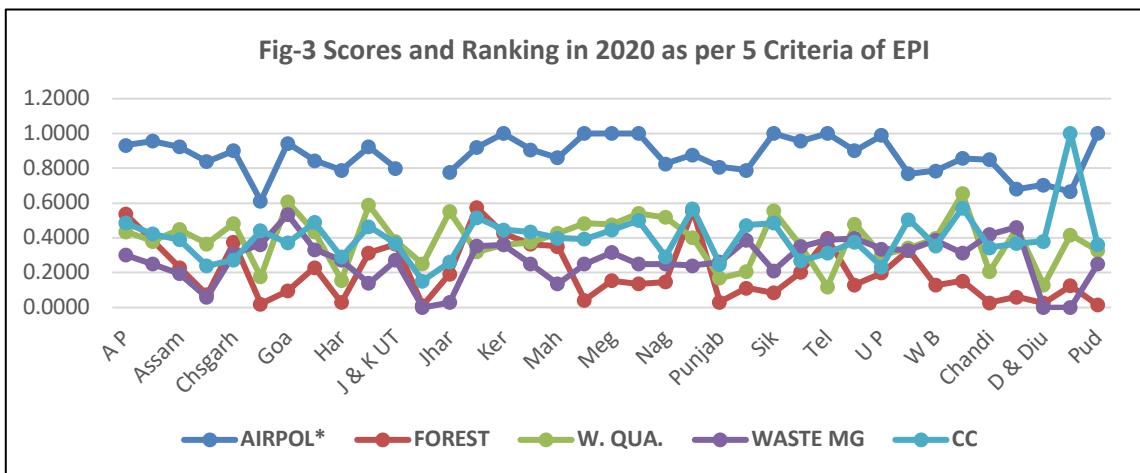

It is observed that all the states meet the prescribed national ambient air quality standards in respect of SO_x of 50 µg/m³. In respect of NO_x, Delhi, D&NH and D&D are the 3 UTs which do not meet the 40 µg/m³ national standard. In respect of PM 2.5 and PM10 except for Kerala, Manipur, Meghalaya, Mizoram, Sikkim, Telangana, Lakshadweep and Puducherry none of other states meets the national standard.

States that meet the standards have been given a score of 1 for each indicator and the average scores derived from the cumulative score and the states ranked. Kerala, Manipur, Meghalaya, Mizoram, Sikkim, Telangana and Puducherry with an average score of 1 are ranked as the best states/UTs in terms of air quality.

As discussed, the 5 criteria with 16 indicators in 2013 has now been compared after data updation and increased number of 21 indicators. (Table- 6). As can be seen, with score 0.5386, 0.5328 , 0.5245, 0.4859 and 0.4790, Andhra Pradesh, Kerala, Goa, Karnataka and Arunachal Pradesh in that order emerge as the best performing States

Table-6:-Comparision of EPI-2013 and EPI- 2020

S.No	States	New 4 Cat		5 old Cat		EPI 2020	
		Score	Rank	Score	Rank	Score	Rank
1	Andhra Pradesh	0.3750	4	0.5386	1	0.4821	2
2	Aruna.Pradesh	0.3575	8	0.4790	5	0.4391	9
3	Assam	0.3140	27	0.4374	22	0.3956	21
4	Bihar	0.3043	32	0.3157	35	0.3186	34
5	Chhatisgarh	0.2733	36	0.4684	11	0.3909	22
6	Goa	0.3345	10	0.5245	3	0.4448	7
7	Gujarat	0.4977	1	0.4427	18	0.4967	1
8	Haryana	0.3067	28	0.3481	32	0.3172	35
9	Himachal Pradesh	0.3291	12	0.4515	15	0.4322	10
10	J & K UT	0.3701	7	0.4571	14	0.4197	14
11	Ladakh UT	0.3159	25	0.1258	37	0.1917	37
12	Jharkhand	0.2878	34	0.3415	33	0.3384	31
13	Karnataka	0.3710	6	0.4859	4	0.4805	3
14	Kerala	0.3719	5	0.5328	2	0.4686	4
15	Madhya Pradesh	0.2794	35	0.4691	9	0.3978	20
16	Maharashtra	0.3315	11	0.4419	19	0.4022	19
17	Manipur	0.3064	30	0.4351	23	0.3905	23
18	Meghalaya	0.3060	31	0.4685	10	0.4169	15
19	Mizoram	0.3242	15	0.4743	6	0.4306	11
20	Nagaland	0.3173	22	0.4488	16	0.3769	27
21	Orissa	0.3213	18	0.4735	7	0.4555	5
22	Punjab	0.3212	19	0.3673	30	0.3196	33
23	Rajasthan	0.3155	26	0.3491	31	0.3749	28
24	Sikkim	0.3268	13	0.4647	13	0.4212	13
25	Tamilnadu	0.4361	2	0.4700	8	0.4397	8
26	Telangana	0.2990	33	0.4347	24	0.3896	24
27	Tripura	0.3223	17	0.4444	17	0.4099	17
28	Uttar Pradesh	0.3166	24	0.4406	21	0.3776	26
29	Uttaranchal	0.3067	28	0.4008	27	0.4060	18
30	West Bengal	0.3902	3	0.4407	20	0.4133	16
31	Andn & Nicobar	0.3346	9	0.4663	12	0.4510	6
32	Chandigarh	0.3167	23	0.4150	26	0.3576	30
33	D & Nagar Haveli	0.3196	21	0.4003	28	0.3794	25
34	Daman & Diu	0.2627	37	0.2455	36	0.2673	36
35	Lakshadweep	0.3203	20	0.3182	34	0.4213	12
36	Delhi	0.3236	16	0.4342	25	0.3378	32
37	Pondicherry	0.3253	14	0.3911	29	0.3740	29

Four indicators: (i) sewage disposal, (ii) water quality of rivers, viz. dissolved oxygen (DO) and total coliform count, (iii) percentage of groundwater exploitation and % of 17 Cat.of Ind. complying with WWT Standards have been considered for the state-wise performance scores for water quality. According to the data made available none of the States have set up 100% treatment capacity for sewage. The scores highlight the dismal performance of the states with respect to sewage disposal.

With regard to surface river water quality violation, except for three states, Jharkhand, Mizoram and D&NH all others for which data are available do not comply with the standards prescribed. Delhi, Haryana, Punjab and Rajasthan extract groundwater more than recharge.

The indicators selected for ranking the states on forest performance are total forest cover (TFC) percentage of state GA and contribution to the national average, change in forest cover during 2015 to 2019, total growing stock and yearly average afforestation effort during 2017 to 2019. Based on deviation method average scores were computed for each indicator and the cumulative average scores used to rank the states. Karnataka, Orissa, Andhra Pradesh, Kerala and Telangana are ranked 1, 2, 3, 4 and 5 respectively (Figure-2)

Figure indicates waste management in the states and considers municipal solid waste (MSW) collection efficiency, treatment and disposal capacity, hazardous waste, biomedical waste and E-waste in terms of capacity set up for treatment and disposal. The results show that the states lack the capacity to treat MSW, hazardous waste and e-waste. Efforts have been made to handle, treat and dispose biomedical waste in terms of capacity set up for treatment but no effort has been made to collect and dispose both MSW and Hazardous waste by the states . as per the rules notified. Considering that Goa treats 80% of the MSW, treats 100% of the biomedical waste, has the capacity to dispose 73% of hazardous wastes generated, and ensures that E-waste generated is recycled in other state it is ranked as the best state (Figure 2) with respect to waste management.

Climate change mitigation was assessed in terms of availability of State Action Plan for Climate Change, % RE Gen. Capacity, Co2 saved by use of LED bulbs per 1000 Pop , % Grid connect Solar power installed and Lives lost per Cr. Lakshadweep, A&N, Orissa, Karnataka and Uttarakhand are ranked 1, 2, 3, 4 and 5 respectively (Figure 2).

The indicators selected for Biodiversity are change in Livestock, Wetland, Protected Area and % increase in desertification. Gujarat, J &K, Madhya Pradesh, Rajasthan and Maharashtra in this order are ranked as top 5 states.

Land under Agriculture, Vulnerable VH &H districts, Area under micro irrigation and % share in total GSVA (17-18) of the states are the four indicators chosen under agriculture. The scores of the five leading states, Nagaland, Arunachal Pradesh, Mizoram, Meghalaya and Kerala are low (0.2865-0.2751) and raises concerns regarding the sector.

The indicators selected under the fisheries category to assess progress by states/ UTs are; Change in fish stock (2015-17), Numbers and Area of marine protected and Biodiversity sites, funds released & utilized for fisheries development and value of marine fish landing (2017-18). Tamil Nadu, Gujarat, Andhra Pradesh, Kerala and Karnataka have been adjudged as the top five states in that order.

The analysis of Disaster Management indicators; State and District DM plans, SDMA & DDMA setup, Budget available for DM, and Forest fire incidence, indicates that efforts have been made by all the UTs and only the state of Sikkim.

Monitoring progress of related SDG and Sendai targets and goals.

EPI 2020 has been constructed based on 9 Category and 37 indicators. These relate to 12 SDG targets and 31 indicators. Table -7 indicates the SDG targets and corresponding indicators for each of the EPI 2020 Category and indicators. Thus EPI 2020 enables yearly assessing the progress made under the 31 indicators related to 12 SDG targets. Table-8 below indicates top 10 countries and India is ranked 115 with a score of 61.1 among 162 countries assessed.

The global indicator framework includes **231** unique indicators. The total number of indicators listed in the global indicator framework of SDG indicators is 247. Twelve indicators are repeated under two or three different targets e.g. 1.5.1/13.1.1, 1.5.3/13.1.2

As per the Sustainable Development Report 2019, Governments need to have access to timely, disaggregated data on the SDGs. Given the breadth of the goals this requires greater investments in statistical capacity in all countries as well as the development of national indicators of progress towards the SDGs.

The 2019 SDSN survey finds there is no common approach across countries for monitoring SDG implementation. The number of national indicators to monitor the SDGs varies greatly from 34 indicators in Belgium to 244 in Canada. The European Union, via Eurostat, has identified 100 indicators to monitor the implementation of the SDGs in the EU. The frequency and approach to measuring distance to SDG targets is also very different across countries. Few have undertaken quantitative assessments of distance to SDG targets.

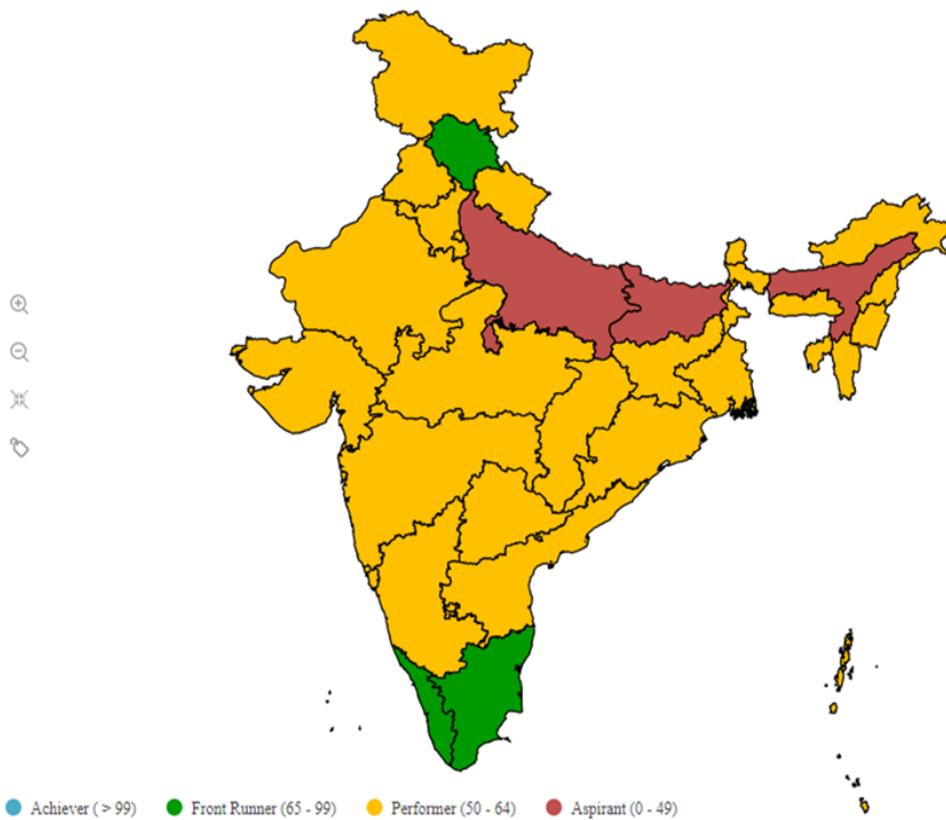

Table-8 -The 2019 SDG Index		
Rank	Country	Score
1	Denmark	85.2
2	Sweden	85.0
3	Finland	82.8
4	France	81.5
5	Austria	81.1
6	Germany	81.1
7	Czech Republic	80.7
8	Norway	80.7
9	Netherland	80.4
10	Estonia	80.2
115	India	61.1

The Niti Aayog, GOI, has setup an SDG India Index Dashboard. The indicator set for **SDG India Index 2019-2020** is large (100 indicators) as compared to SDG India Index 2018 (62 indicators) and hence the two indices are strictly not comparable. There are 40

indicators that are common across SDG India Index 2018 and SDG India Index 2019-2020. Fig-4 indicates the progress made by the 29 states in India.

Fig-4:- SDG India Index 2019-2020. Progress made by the 29 states in India.

Sendai Targets and Goals

In order to accelerate implementation of the Sendai Framework for Disaster Risk Reduction (2015-2030) at local level, the ten Essentials map prepared indicates directly the action and its indicators for monitoring progress on disaster risk reduction. They are the critical and independent steps that need to be undertaken to build and maintain resilience. This document provides the rationale for each Essential, pointing out strategic areas of intervention and identifying key actions. The actions identified under each Essential should be part of the overall disaster risk reduction planning process and influence urban development planning and design.

As indicated in Table-3 following 4 indicators under the category Disaster

1. Status of State DM Plan

2. Institutional setup state (SDMA) and District (DDMA)

3. Budget in Crores 18-19(Dec)

4. No. (2017) and average (2017 ,2016) Forest fire incidence,

Management of EPI 2020 which are also SDG indicators; 1.5.2, 1.5.3/13.1.1, 11.5.2, 11.b.1 and 11.2 are part of the following ten essentials map for monitoring DRR under Sendai Framework.

1. Organise for disaster resilience, 2. Identify, understand and use current and Strengthen future risk scenarios, 3 financial capability for resilience, 4. Pursue resilient urban development and design, 5. Safeguard natural buffers to enhance the Protective functions offered by natural capital , 6. Strengthen institutional capacity for resilience , 7. Understand and strengthen societal capacity For resilience , 8. Increase infrastructure resilience , 9. Ensure effective disaster response and 10. Expedite recovery and build back better.

EPI 2020 enables assessing 7 of the 10 indicators for monitoring DRR under Sendai framework. Table-5 and Table-5.9 highlights the scores and rank of each Indian State and UT.

ACKNOWLEDGEMENTS

We also thank Dr Nalini Bhat, Former Adviser, MoEF for her constructive ideas.

APPENDIX

Table 4: - Datasets used for construction of Indicators.

S.No	Criteria	Indicator	Data Set	Abbre
1	Air pollution	1.SOx Adherence to NAAQS 2.NOx 3.PM2.5 4.PM10	1.Sox, Ambient Concentration -Adherence to NAAQS by states. 2.NOx, Ambient Concentration -Adherence to NAAQS by states. 3.PM2.5, Ambient Concentration -Adherence to NAAQS by states. 4.PM10, Ambient Concentration- Adherence to NAAQS by states.	
2	Forest	1.Total Forest Cover (TFC) 2.Change in Forest cover 3.Growing Stock 4. Afforestation efforts	1 Forest % of State GA & Contribution to National Forest Cover. 2. Change in state Forest cover, 2017-2019. 3. Forest Stock state wise in Million cu.m 4.Afforestation efforts made during 2017-18 in Ha.	TFC
3	Water Quality	1.% Sewage Waste water treated 2.Surface water quality (DO, BOD & FC) 3.Ground Water extraction % 4. % of 17 Categories of Industries complying with WWT Standards	1.Sewage generation and treatment capacity state wise. 2.River water quality; Dissolved oxygen (DO), Biological Oxygen Demand (DOB)and Total Fecal Coliform (FC) state wise. 3.% Ground water (GW) extracted state wise. 4.% of 17 categories of polluting industries notified adhering to Waste Water Treatment (WWT) standards.	FC WWT
4	Waste Management	1.MSW generated, collected and treated. 2.Haz. waste generated and treated 3.Biomedical waste generated and treated 4.E-Waste generated, treated and recycled.	1.Municipal Solid waste (MSW) generated, collected and treated by states Per year. 2.Hazardous Waste generated and treated by industries yearly in the states. 3. Biomedical waste (BMW) generated and treated by hospitals in the states yearly. 4. Electronic waste (EW) generated, treated and recycled by states per year.	MSW HW BMW EW
5	Climate and Energy	1.Status of SAPCC 2.%RE Gen. Capacity 3. Co2 saved from LED bulbs per 1000 Pop. 4.Instal. Grid connect Solar power % 5.Lives lost per crore population.	1.Status of preparation of State Action plan for Climate Change. 2. % capacity state wise of Renewable energy generation. 3.State wise. Co2 emission saved by use of LED bulbs per 1000 P. 4. State wise % Grid connection of Solar power installed. 5.Lives lost due to calamities per crore of population in states.	SAPCC RE
6	Biodiversity	1.Indigenous livestock population change 2. Wetland Area state wise 3. Protected area state wise 4. % desertification	1. Yearly Change in Livestock population state wise. 2. Total wetland Area recorded in 2019 in each state. 3.Protected Area in 2018 state wise. 4.Total land lost to desertification and State wise percent.	
7	Agriculture	1.Land under Agriculture state wise 2.Agri districts and VH and H vulnerable districts. 3. Land (Ha) under Micro irrigation 4. % share in total Gross State Valuation of Agriculture 17-18	1.Land under Agriculture state wise 2.No. of Agri districts and Very high and highly vulnerable districts in each state. 3. State wise land under micro irrigation. 4.% share of Agriculture of all states in total Gross State Valuation (GSV) in 2017-18.	VH & H GSV
8	Fisheries	1.Change in Fish Stock in Tonnes 2. No. and Area of Marine, Protected and biodiversity Sites. 3. Funds released 2017-18 in Lakhs and % of funds received by states. 4. Valuation (in Cr) of marine fish landing in 2017 & 2018 and share of landing state wise	1. Change in Fish Stock in tonnes state wise. 2. State wise No. and Area of Marine, Protected and Biodiversity Sites notified. 3. Funds released under various fishery schemes in 2017-18 in Lakhs and % of funds received by each state. 4. Valuation (in Cr) of marine fish landing in 2017 & 2018 and share of landing state wise.	Cr
9	Disaster Management	1.Status of State Disaster Mg. Plan 2.Institutional setup state (SDMA) and District (DDMA) 3. Budget in Crores 18-19(Dec) 4. No. (2017) and average (2017 ,2016) Forest fire incidence	1.Status of preparation of State Disaster management Plan (SDMP) by the States. 2.Status of Setting up of State and District Disaster Management Authorities in the States. 3.Budget (Cr) allocated for Disaster Management to states in 2018-19. 4. No. (2017) and average (2017 ,2016) Forest fire incidence recorded state wise.	DM SDMP
